Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

1. Claim 17 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. It is noted that claim 17 is dependent to subsequent claim 19, and fails to limit the subject matter of a previous claim. Since examiner was unsuccessful to reach the applicant, examiner withdraws the previous Office Action, mailed 3/18/2008, in order for applicant to correct the dependency error, thus may expedite the prosecution of application.

Claim 6 have been canceled.

Allowable Subject Matter

2. Claims 1-5, 7-16 and 18-24 are allowed.

3. The following is an examiner's statement of reasons for allowance: the prior art of the record fails to anticipate or rendered obvious, a first circuit configured to acquire a current picture, a first reference picture and a second reference picture; a second circuit configured to generate a measurement of inter-picture motion between the current picture and the first reference picture by performing a global motion estimation process on the current picture and the first reference picture; a third circuit configured to generate a control signal in response to (i) the measurement of inter-picture motion between the current picture and the first reference picture and (ii) a predetermined threshold value; fourth circuit configured to select either the first reference picture or the

second reference picture as a better reference picture for subsequent motion estimation and motion compensation on the current picture in response to the control signal and a motion estimation circuit configured to generate one or more motion vectors in response to the better reference picture and the current picture, wherein the current picture is encoded based upon the one or more motion vectors, as specifies in the claims.
